

# KIER & WRIGHT

## Civil Engineers & Surveyors, Inc.

With over 40 years in the engineering and survey field Kier & Wright is the top choice for all of your entitlement, land planning, design, or construction staking needs. Offices in Livermore and Santa Clara, with satellite offices in Sacramento, and Ventura, allow efficient and cost effective service throughout California.

### ***Entitlements & Land Planning***

Depending on your projects needs, we can assist you with the land planning process for various types of projects including residential subdivisions, master plans, office and retail developments, as well as infrastructure plans.

Our experienced teams can guide you through the entitlement process from purchase to construction. These teams specialize in due diligence, feasibility, marketing brochures, density studies, tentative maps, and master plans. The engineering teams at Kier & Wright can fully facilitate design projects, work directly with you, the owner, and the city to help expedite the entitlement and land planning processes.

Don't forget about surveys! We have in-house surveyors that perform ALTA, boundary, and topographic surveys. This allows maximum efficiency since our surveyors have direct access to the design and engineering teams.

### ***Design***

The success of your project in today's competitive development industry is directly dependent on your civil engineering choice. With comprehensive, cost effective, and accurate designs Kier & Wright is the superior selection for your next project. Our engineers are constantly focused on meeting deadlines and overcoming obstacles, no matter the size of the project. A single home or a 250 acre industrial park receive the same outstanding level of service and dedication from our team.

### ***Construction Staking***

We have extensive experience staking all types of construction projects, from highways to high-rise buildings, from city parks to industrial parks, Kier & Wright is an accomplished surveyor. All survey crews are trained and fully equipped with the latest in surveying technology, including GPS equipment, tablets, and robotic total stations. Our engineers and surveyors work together to provide
